

SAPERION SUITE FOR SAP®

The software solution completely certified by SAP® for a rapid integration into your SAP® system

Stay on the safe side with your SAP system. Take advantage of this integrated and certified software solution that allows you to store all SAP data and documents in a revision-proof way. Compliance with all legal requirements at any point in time goes without saying. The application can be scaled to an unlimited extent. SAPERION is an easily implemented high-capacity solution.

SAPERION Suite for SAP means extending your SAP system with the highly important features of an Enterprise Content Management (ECM) system. The focus rests on archiving, document management and workflow and business process management.

At a Glance

Scalability and easy implementation:

Due to its modular design SAPERION Suite for SAP® can be scaled to an unlimited extent and can be rapidly adjusted to meet your requirements in a flexible manner. Due to the separation of single functionalities, SAPERION can be **instantly implemented only with the functionalities required**.

Familiar look and feel for SAP users:

The SAPERION Suite for SAP® completely integrates into the existing SAP® system. As a result, the integrated SAPERION functionalities can be used via the SAP® user interface. This is especially important for the integration into the SAP® Enterprise Portal where all functionalities are provided as iViews. Users are able to work with **their familiar user interface and can take advantage of SAPERION's functionalities without the need for additional training**.

Compliance and legal requirements:

SAPERION enables the **audit-compliant archiving of all SAP® data and all relevant documents**. In this way, legal requirements regarding the capturing, storage and provision of business-crucial information are adhered to.

Access to data without SAP® reference:

Using the Document Finder Integration, SAPERION adds one important functionality to the SAP Document Finder: This new functionality permits users to **access all documents (even SAP® independent ones) via an already familiar interface**. The fast link functionality also allows for linking SAP® Business Objects to any other document.

Common access to SAP® documents is not only for SAP® users:

The SAPERION Indexer indexes all SAP® documents. As a result, all users have equal access to the information stored in the archive. For this purpose, it is **irrelevant whether the information is accessed using SAP®, or via the SAPERION client or by using a Web application**.

Process optimization:

The possibility to jointly use the central data repository **lowers cycle times**. User-specific document viewing speeds up the user acceptance process.

BENEFITS / FACTS

- + Automate and accelerate your processes
- + Access information about all procedures and transactions - at any time
- + Transparency as result of connecting SAP data with its underlying documents
- + Comply with all legal requirements regarding archiving and the availability of your business-related information
- + Simple integration of your corporate archive into SAP Document Finder, Records Management or your SAP Enterprise Portal

SAPERION Suite for SAP® (SAP® certified)

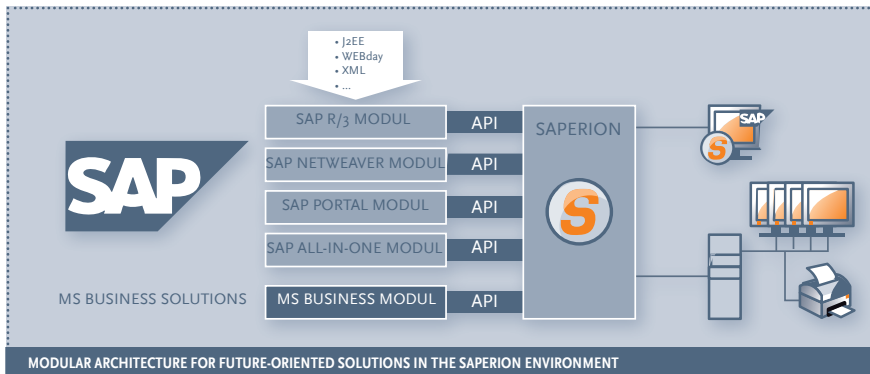

Integration:

- + Use the SAP Web filter for single sign-on (SSO)
- + Use of iView technology

SAPERION provides a broad range of tools for optimizing SAP-based processes. From automatic capturing and storage of incoming documents to unburdening your IT infrastructure to legal compliance due to the revision-proof storage of SAP data and all associated documents, the implementation of SAPERION improves the performance of your SAP system and increases transparency.

Individual functions are divided into separate modules. As a result, you can select only the features you really need in order to achieve an optimal result. Subsequently, you can also extend the system according to your requirements thanks to the software's high flexibility.

The easy, fast and flexible system implementation does not require any programming efforts, only customization efforts.
